

STOKES COLONIAL POST INSTALLATION AND REMOVAL GUIDE

INSTALLATION INSTRUCTIONS

1. Determine the direction the sign is to hang and install ground anchor with angle and bolts pointing in direction sign is to hang.
2. Drive the ground anchor into ground. A block of wood can be used to strike, if you wish. The anchor should be straight and driven all the way into ground. If the ground is extremely hard or frozen, making a preliminary hole is recommended.
3. Slip post over the ground anchor and secure with two lock washers and wingnuts as shown.
4. Fasten cross arm post with bolt then lock washer and wingnut.
5. Insert eyebolts thru cross arm as shown. Install the two plastic rider holders if top riders are used and fasten with nut.
6. Stainless steel safety pin clips attach the sign to eyebolts.

REMOVAL INSTRUCTIONS

When removing sign from the ground, disassemble first. Remove ground anchor by striking on each side several times to loosen. (In extreme conditions a slight prying may be necessary.)

Ground anchors will last longer if care is used in removing them. Replacement ground anchors are available.

Please wear eye protection.
